SUMMARY

I've spent 5+ years building Flutter apps for production. More than 10 are live on Google Play and the App Store, in health, fintech, media and enterprise. My best work is in health-platform integrations (Apple Health, Google Fit), apps that keep working offline, and Arabic/English RTL products. I usually own the architecture and the release pipeline, from first commit to store listing, mentor junior developers through code review, and maintain an open-source billing package on pub.dev.

EXPERIENCE

Senior Flutter Developer · Girix Solutions

Apr 2024 - Present

Cairo, Egypt · Full-time

- Lead mobile development across 6 apps shipped to Google Play and the App Store, from requirements to production
- Set up the Clean Architecture / MVVM structure the team uses across its products
- Fixed frame drops on list-heavy screens: moved JSON parsing to isolates, switched to lazy list builders with cached, resized images, and cut rebuilds with const widgets and BlocSelector/buildWhen
- Cut startup time by deferring service and SDK setup until first use instead of running it all at launch
- Mentor 2 junior developers through structured code review; wrote the team's coding standards and documentation
- Agree API contracts with backend and check UI against the designs before each release

The Kitchen · iOS | Android · *Restaurant POS and management*

- Built the POS offline-first: orders and inventory live in a local database the UI reads from, so the restaurant keeps taking orders without internet
- Orders placed offline go into a sync queue that sends them on reconnect and resolves conflicts with the server's data
- Prints receipts and kitchen tickets straight to thermal printers, with no network needed

Rawafed · iOS | Android · *Real estate consulting and services*

- Built the app from scratch as lead mobile developer: property listings with search and Google Maps, plus service requests users can book and track
- In-app payments for services, FCM push notifications, and full Arabic/English RTL

CRM GTS · iOS · *Client self-service portal*

- Main developer of the portal where a software vendor's clients manage their account: licensed programs and activations, invoices with QR codes and itemized detail, and support tickets and complaints with comment threads
- OTP password reset, FCM and local notifications, offline detection with retry, and Arabic/English localization

Islami Hub · iOS · *Quran, prayer times and azkar* (team of 3)

- Vendored and patched the alarm plugin's native Android code so the azan stays silent while the user is on a call or using the mic, plus alarm volume control
- Built Daily Hadith with a Hive cache and an offline fallback in 5 languages, and city-change detection that keeps prayer times correct when the user travels

Mini Sales and Mini Wash · *Point of sale for Saudi retail and laundries, in development*

- Offline-first POS apps with ZATCA Phase 2 e-invoicing: invoices are cryptographically signed on the device and sent through an upload queue when the network returns, with signed returns and re-issue of rejected documents
- Printing on Sunmi handhelds, Bluetooth and network printers; billing runs on my own erp_calculator package; 80+ test files across the two apps

Mobile Software Engineer · Sanad

Oct 2023 - Present

Cairo, Egypt · Part-time

Sanad Rewards · iOS | Android · *Health challenges and rewards*

- Built the health-challenge platform on Apple Health and Google Fit with the health plugin, plus background sync so steps reach challenges without the user opening the app
- Built the challenge features, including team challenges and a custom Lottie-animated challenge calendar with location-based tracking
- Built an offline-first content platform (articles, podcasts, video, community feed): Hive cache shown first, a Dio cache interceptor at the network layer, and downloadable podcasts and videos for offline playback
- Own releases on both stores, and ship Shorebird over-the-air patches so fixes don't wait for store review

Sanad Business · iOS | Android · *Workplace wellbeing*

- Rebuilt Sanad's corporate wellness mode as a standalone Flutter app that matches the live app's behavior, and shipped it to both stores

Pulse · iOS | Android · *Gym training and fitness*

- Real-time chat over Pusher, pedometer step tracking, video workouts, and FCM reminders for workouts and streaks

Flutter Engineer · League Plus

May 2024 - Mar 2025

Cairo, Egypt · Contract, part-time alongside full-time role

- Built and shipped a sports-prediction app: live match predictions plus private leagues that users create and run
- Live match data over GraphQL subscriptions, so scores and predictions update the moment the server pushes them
- Deep-link referral flow that drops invited friends straight into a league
- Personalized push notifications through Firebase Cloud Messaging

Flutter Developer · Freelance

Aug 2021 - Nov 2023

Remote

- Shipped 4 production apps solo (healthcare, media, transport), owning requirements, architecture, testing and store release
- Integrated payment gateways, Agora real-time chat, Google Maps and thermal printing; built a reusable component library that sped up later projects

A Year in Review · iOS | Android · *Medical conferences*

- QR attendance, workshop enrollment and live Q&A with moderators; full Arabic/English RTL

I-News TV · iOS | Android · *Live news streaming*

- HLS/RTMP adaptive-bitrate streaming, a custom video player, and breaking-news alerts

OPEN SOURCE

- **erp_calculator** (pub.dev, verified publisher). A pure-Dart billing engine: exclusive, inclusive and no-tax modes, item-level and bill-level discounts, and a step-by-step audit trail of every calculation. Runs on every Flutter platform including web/WASM; 140/160 pub points. pub.dev/packages/erp_calculator

SKILLS

Daily	Flutter, Dart, BLoC/Cubit, Clean Architecture, MVVM, REST, Firebase (Auth, Firestore, FCM, Crashlytics, Analytics), GoRouter, Git
Production experience	Apple Health, Google Fit, GraphQL subscriptions, WebSockets/Pusher, Agora, Google Maps SDK, payment gateways, thermal printing, Supabase, Hive, SQLite, Dio, isolates, deep links, Lottie
Release and quality	GitHub Actions, Fastlane, Shorebird; unit, widget and integration testing; code review
AI-assisted development	Claude Code, MCP tooling in the daily workflow
Familiar	Provider, Riverpod, GetX
Languages	Arabic (native), English (professional working proficiency)

EDUCATION

B.Sc. Computer Science · Faculty of Computers & Information Sciences, Mansoura University · 2016 - 2020

ITI · Full Stack .NET Web Development · Jul - Sep 2019

CERTIFICATIONS

- Flutter Advanced: Clean Architecture & MVVM · Udemy, Mar 2025 · View
- Certified Software Engineer · HackerRank, Mar 2025 · View
- Clean Architecture & Testing Masterclass · Udemy, Jan 2021
- Flutter BLoC Pattern · Udemy, Mar 2020

ADDITIONAL

Military service: completed
